Next G™ Network Coverage

- Voice, Picture, TV, Video & Broadband
- Voice, Picture, TV, Video & Broadband with an external antenna

Coverage, speed and performance will be improved as the network is enhanced and extended and can often be improved by adding an external antenna.

Customers should be aware that the Telstra wireless coverage maps displayed have been created using tools that predict the likely areas of coverage. This means that while the footprint of coverage outlined on the maps is generally accurate, there will be specific areas described as being within a coverage area where a customer's mobile phone will not work. This is a common characteristic of wireless systems. For example, coverage could be degraded or not exist in specific locations due to certain physical structures or geographic features. Physical structures which may block or inhibit coverage could include basements, lifts, underground car parks, concrete buildings, tunnels and road cuttings. Geographic features which may block or inhibit coverage could include formations such as hills and mountains or even trees.

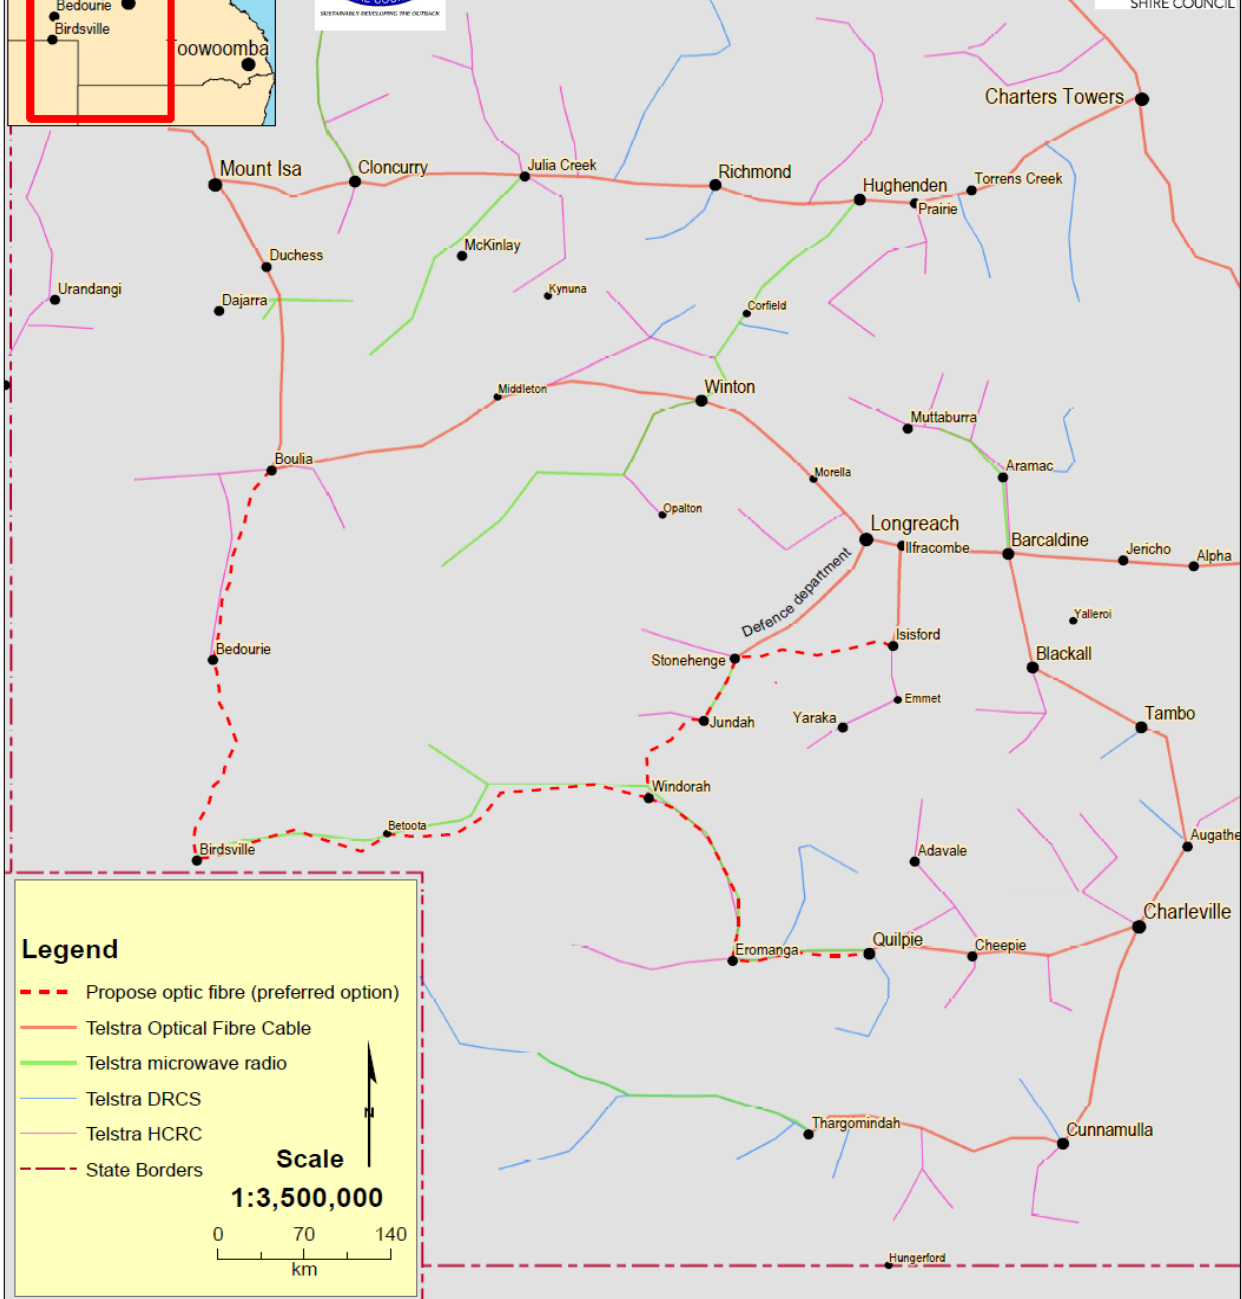

Customers should also be aware the Telstra wireless coverage maps also may indicate planned coverage expansions of the Telstra wireless network. Coverage planned for the future is based on Telstra's rollout schedule. Telstra reserves the right to modify this schedule without notice, as required from time to time.

Data speeds experienced on Telstra's wireless networks may be affected by network availability, the type and configuration of customer equipment, the performance of external networks (for example the Internet), the signal strength of the device used and other factors such as the type of application being used.
